

ECO-FRIENDLY ROOFING: A RESOLUTION FOR 2019

By V & V Roofing

Ever wondered how you could help the environment without leaving your home? Do you have a unique and impactful way to start 2019? Maintaining and utilizing your roof can help lead to a healthier and happier environment, and you can do your part before the new year! Here are a few ways you can be eco-friendlier with your roof:

1 – Use the right ventilation and insulation.

Heating and cooling can be some of the most expensive utilities for your home. Correct insulation and ventilation for your roof can reduce power and the use of fossil fuels while keeping your house at the most comfortable temperature cheaply.

2 – Maintain your overgrowth.

Roofs are prone to all kinds of damages, and untamed fauna can lead to serious problems for your home.

A well-kept property makes for a healthier roof, so you won't require unnecessary materials.

3 – Brighten your home with natural light.

Daylighting (the use of solar-reflective tubes) and skylights can be implemented to bring sunlight into your home. With natural light, you won't need to use electricity to light your way.

4 – Catch the rain.

To help save water, place water barrels where water drains off your roof. With this, you can water your garden and lawn and clean outdoor areas.

Collecting and using drained water is an easy way to save money, and it helps conserve usage.

5 – Take good care of your roof.

Unclog drains, brush off limbs, and patch damaged shingles.

Roofs have a long half-life, but they need occasional maintenance in order to keep your home protected from the elements.

You won't have to replace your roof for a long time, and roofing companies can limit wasted shingles.

You can have a noble resolution this New Year by cleaning your roof and using it efficiently. V & V Roofing is here to help you keep Louisiana's environment healthy, and we have some innovative and unique solutions to address all your roofing needs. Contact us today for more information!
